

Diarsa Global — Site Review Questions

Prepared 16 August 2026. This document lists everything needed before the new site ships. Read this for context, then fill in your answers on the attached Word template and upload it back through the review page.

1. Visual Direction

The current build's dark tone is a near-black that reads closer to generic app design than an engineering firm. The alternative, **Blueprint Navy**, ties that same dark tone to technical drawings and survey plots instead, and pairs more cleanly with the orange brand accent, which stays identical either way.

Compare both versions of the live site (links provided separately), then choose one:

- Keep current (near-black)
- Switch to Blueprint Navy
- Something else — let's talk

2. Quick Answers

These don't need new material — just a decision or a number.

1. **Careers page** — Publish one at all? If yes, which roles, and what should it say?
2. **Team headcount** — Real number for the stats strip on the About page.
3. **COREN & SURCON registration numbers** — For verified credential badges, not just a text mention.
4. **Confirm the 7 service categories** — Civil Engineering, Geomatics, GIS & Digital Mapping, Hydrological & Water Resources, Environmental, Project Planning & Advisory, R&D. Does this match how you think about the business?
5. **Sister company names** — 3 placeholder tiles on the Partners section. Real names and logos, or confirm there's nothing to feature there.

3. Needs Real Material

Bigger lift — fine to send over time rather than all at once.

1. **Project & site photography** — Every project page is on stock photography right now. Need real shots per project, during construction and/or completed.
2. **Real client quotes** — Every quote on the site is attributed to a generic team name. Replace with real named quotes, or drop the quote blocks.
3. **Your photo + a short quote** — For the Leadership section on the About page.
4. **Company milestones** — Decade-by-decade key dates for a timeline, since 2015.
5. **Completion certificates / award letters** — Not built yet. Worth deciding if you want proof-of-work documents displayed per project.

4. Infrastructure

Operational decisions, not content.

1. **Domain** — Confirm diarsaglobal.com should point at this build once it ships.
2. **Lead inbox** — Which email should receive Contact & Quote form submissions?
3. **Database** — Do we need one at all (saved leads, careers applications), or is email-only enough?
4. **Error alerts & analytics** — Who gets notified if something breaks, and what should we track on visits?

5. Anything Else

Anything you don't like, want changed, or want added that isn't covered above — write it here.
